# CREDITS

For my application, I have decided to pretend that I have had the honor of developing a mobile application for the Blood-Horse.com Stallion Registry. The key is to provide all of the pertinent information that mare owners would be looking for in a way that is easy to read and navigate through.

I have chosen five stallions to begin the process with as well as the information I wish to include in the application. The desktop version of the site contains a much more in depth look at each stallion, but the mobile application will only contain what is deemed most important.
